CALLZONE MANAGEMENT

Quick guide on one page

Shows who is at the wall, who is up next and who comes after. The data comes live from results.info; the app is read-only.

1 · Open the display

Open **callzone-management.onrender.com** in a browser (iPad, phone, laptop). Enter the **Event ID** (it is in the results.info address), choose the **Server**, click **Load event**.

2 · Reading the wall

- **CLIMBING** (green): climbing now · **NEXT** (red): up next. The waiting list is below.
- Several routes/boulders = one column per route. Boulder with Group A/B or Course A/B: tabs at the top to switch.
- Blue frame with **TI**: the athlete climbs again after a technical incident. **“TI: no athlete”**: this place stays free, do not call anyone.
- Dimmed names at the end of the list: preview of the next category.
- Speed finals: one column per lane, the knockout stage advances by itself. On every Speed display with two lanes (qualification, final, training) **Swap lanes** swaps the sides, per tablet.

3 · Three modes (tabs)

- **Single round**: one round, one device. Select it, click **Show**.
- **Training**: Speed training, advanced by hand (**Next →** / **← Back**), also from a phone with a control link.
- **Sequence – Advanced**: several entries one after another. Everything for several tablets or a longer schedule is here.

4 · Building a sequence

- **+ Add round**: one round (moves on as soon as it is finished).
- **+ Add paired entry**: two Speed finals alternating, always on the same stage. If needed **Switch category now**.
- **+ Add training**: Speed training in the middle of the schedule; at the last position all tablets move on.
- **+ Add split view**: 1 to 5 categories side by side, each column with its own round order, group and routes. Done when **all** columns are done. **Continue the columns above** appends rounds column by column to the entry above.
- Reorder with ▲▼ or drag. Every round only **once** in the whole plan. **Skip to next** skips a stuck round (without a session only).

5 · Tablet tips and problems

- **Fullscreen + Always On**: full screen, display stays on (iPadOS 16.4+). Save the page as bookmark/home icon.
- **Connection lost / display frozen**: reload the page. **Couldn't load event**: check Event ID and server.
- Top right: session ID. “offline”: the tablet keeps showing the last plan.

6 · Shared session (all tablets, one plan)

1. Build the sequence, open **Shared session** at the bottom, choose a **host password** (min. 4 characters), click **Create shared session**.
2. Open the **link or QR code** on every tablet. The tablets need no password.
3. Changing the plan: change the sequence, click **Apply to all tablets**. Moving and adding changes nothing on screen, every tablet stays on its round. If a running round is removed, the app asks first.
4. From another device: session ID + password, **Edit existing session**. Write the password down, it cannot be reset.

7 · Technical incident (TI) – Lead and Boulder only

The Callzone does not calculate. The jury president (JP) takes over the position from the **TI calculator** (ti.comptools.cloud) here.

1. In the host area open **Jury President (JP)**: link + QR for the JP. Open it on a phone, enter the host password once.
2. Choose the **Round** (for Boulder the group/course). **Athlete who climbs again**: type the bib (also #12 or a name). Every athlete of the block can be chosen, also one who is already done.
3. **Boulder**: on which boulder the athlete climbs again.
4. Enter the result of the TI calculator:
   - **Boulder 1 stays free in front of a start position**: type the start position X that the TI calculator names for Call Zone B1 (“in front of X”). Below it shows who that is (typo check).
   - **No gap needed (end of the start list)**: the TI calculator says no gap is needed.
   - **No new gap: uses the slot of another TI**: choose the other TI.
   - Lead: only “in front of a start position” or “at the end of the start list”.
5. **Add TI**. The wall shows the athlete only on his boulder, on all other boulders **“TI: no athlete”**.
6. If the position changes in the TI calculator: **Edit**, adjust, **Save changes**. When the athlete has climbed: **TI done**. Created by mistake: **Remove**.

The TI also ends by itself as soon as the athlete it stands in front of climbs on that route. results.info does not record the repeat: for Boulder the previous athlete stays CLIMBING until “TI done”. A TI at the end of the start list holds the sequence.
