

# CALLZONE MANAGEMENT

## User Guide

### Contents:

1. The Settings Screen
2. Reading the Display
3. Lead
4. Speed
5. Bouldering
6. Split View
7. Appendix: Error Messages & Feedback

### Link to the website:

<https://callzone-management.onrender.com>

## 1. The Settings Screen

When you open the app, you first see this settings screen. Here you choose which competition and which category/round you want to display.

1. **Event ID:** Enter the ID you find in the address on results.info, e.g. at dav.results.info/event/**2101**/... this makes the Event ID 2101.
2. **Server:** select “dav.results.info” for DAV competitions, “ifsc.results.info” for Worldclimbing competitions. “dav-stage.results.info” can be used for testing.
3. Click “**Load event**”.

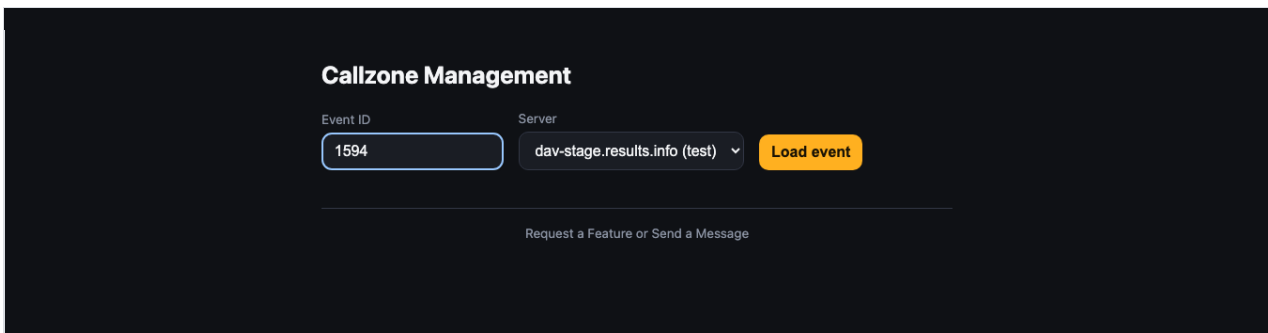

Figure 1: Event ID and server have been entered, ready to load.

4. Three tabs appear at the top: “**Single round**”, “**Sequence**”, “**Training**”. “Single round” (the default) shows a single round; “Sequence” and “Training” are explained starting in Chapter 4, since they are mainly needed for Speed.
5. In the dropdown, select the appropriate **category and round** (e.g. “BOULDER Men+ — Qualifikation”).
6. Click “**Show**”.

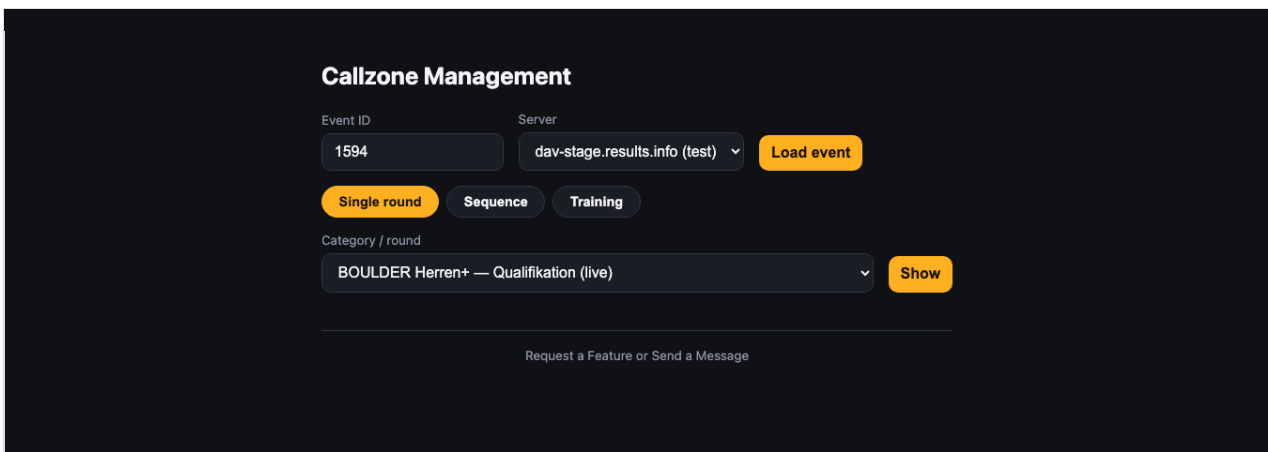

Figure 2: Mode tabs and round selection after loading the event.

The display then updates itself automatically every few seconds. You don't need to do anything else.

## 2. Reading the Display

The basic principle is the same for all three disciplines (Lead, Speed, Boulder). Here using the example of a Lead qualification with two routes:

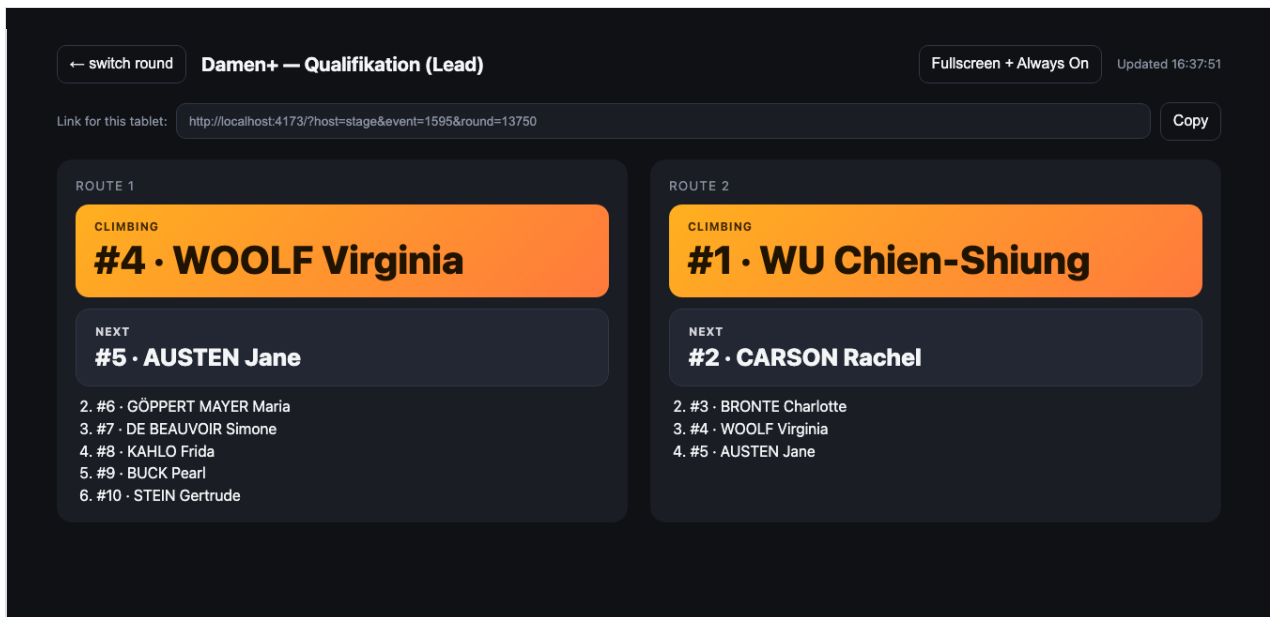

Figure 3: View of a Lead qualification with two routes. The basic principle applies to all disciplines.

- **At the top, large, orange ("CLIMBING"):** the athlete who is currently on the wall.
- **Below that ("NEXT"):** the athlete who is up next.
- **List below that:** the athletes who follow after that.
- If there are several routes/boulders at the same time, a separate column is shown for each.

Using "**← switch round**" at the top left, you can switch to a different category/round at any time.

### Multiple Tablets at Once

Each tablet can independently display its own category/round. Using the "Link for this tablet" field (visible in Figure 3), you can copy the link for exactly this round and save it as a bookmark/home screen icon on that one tablet. After that, this link will always open directly to the correct round on that device.

### Fullscreen & Screen Always On

The "**Fullscreen + Always On**" button (top right) opens the page in fullscreen and prevents the tablet display from switching off automatically.

#### Important for iPads (iOS)

"Fullscreen + Always On" alone is not enough on an iPad, since iOS still switches off the screen automatically. You additionally need to set this in the iPad's **Settings: Display & Brightness → Auto-Lock → "Never"**.

### 3. Lead

For Lead, simply the basic principle from Chapter 2 applies. One column per route, “CLIMBING”/“NEXT”/waiting list. Lead has none of the special features from the following chapters (no training mode, no interleaving, no group tabs for a single route).

Qualification: if several routes run in parallel (as shown in Figure 3), all routes are automatically displayed side by side.

### 4. Speed

Speed has two features that don't exist anywhere else: interleaving two categories in the final, and the training mode without live results.

#### Interleaving Two Categories

For Speed final rounds, the schedule often runs interleaved: first the round of 16 for category 1 and 2, then the quarterfinal for both, then the semifinal, and so on, until both knockout brackets are finished and it continues with the next category combination.

1. At the top, select the **“Sequence”** tab.
2. As soon as the event contains at least two Speed final rounds, next to **“+ Add round”** the note **“or interleave two Speed finals:”** appears, along with the **“+ Add paired entry”** button. This already works even before the final rounds have started, so the order can be set before the competition begins.
3. Click **“+ Add paired entry”**. This immediately fills the entry with the first two not-yet-used Speed final rounds.
4. If different categories should be paired instead, each side can be changed directly via its own dropdown.

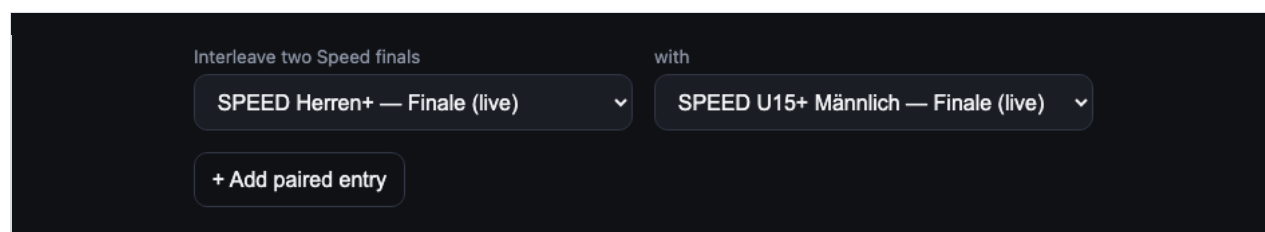

Figure 4: Select two categories and add them to the sequence as a pair.

This creates a single entry “A ↔ B” in the sequence list (not several separate entries). With “+ Add round” you can additionally insert normal individual rounds before or after the pair, even across disciplines — for example to switch from the Lead qualification of one category to another category:

Figure 5: An “A ↔ B” pair in the sequence list, ready to display.

5. Click “Show sequence”.

Figure 6: Interleaved display: “Interleaved with” shows the other category, “Stage: 1/4” the current knockout stage.

The display deliberately keeps both categories on the same stage, even if one progresses faster than the other. If it doesn't advance automatically at some point (e.g. because a single result gets stuck), the other category can be displayed using the “⇒ Switch category now” button at the top of the board.

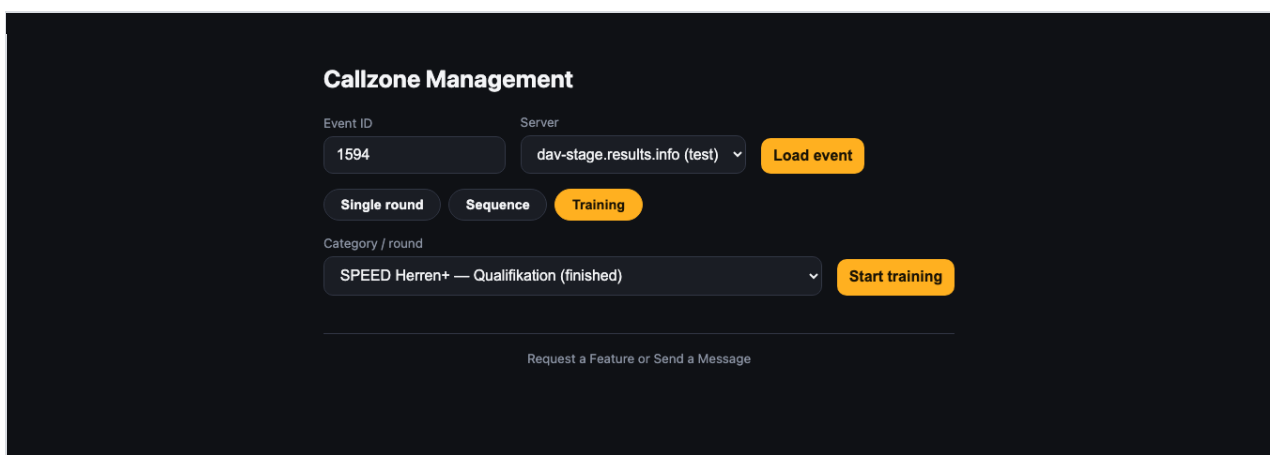

## Training Mode

Training sessions do not run through results.info and therefore do not provide live results. However, the starting order in training corresponds to the order of the real qualification round. This qualification order can therefore be reused, with advancing done manually.

### Speed Only

Training mode is intended exclusively for Speed. If a Boulder or Lead round is selected in the dropdown, the “Start training” button is disabled.

1. At the top, select the **“Training”** tab.
2. Select the appropriate (Speed) round. Usually the qualification round whose starting order matches the training session.
3. Click **“Start training”**.

The screenshot shows the 'Callzone Management' interface. At the top, there's a title 'Callzone Management'. Below it, there are two input fields: 'Event ID' with the value '1594' and 'Server' with a dropdown menu showing 'dav-stage.results.info (test)'. To the right of the 'Server' dropdown is a yellow button labeled 'Load event'. Below these fields are three tabs: 'Single round', 'Sequence', and 'Training', with 'Training' being the active tab. Below the tabs is a dropdown menu for 'Category / round' showing 'SPEED Herren+ — Qualifikation (finished)'. To the right of this dropdown is a yellow button labeled 'Start training'. At the bottom of the interface, there is a link that says 'Request a Feature or Send a Message'.

Figure 7: Training mode: select and start a round.

Instead of the automatic live display, a control panel appears at the top with “← Back” and “Next →”. Each click on “Next” advances all lanes together by one position.

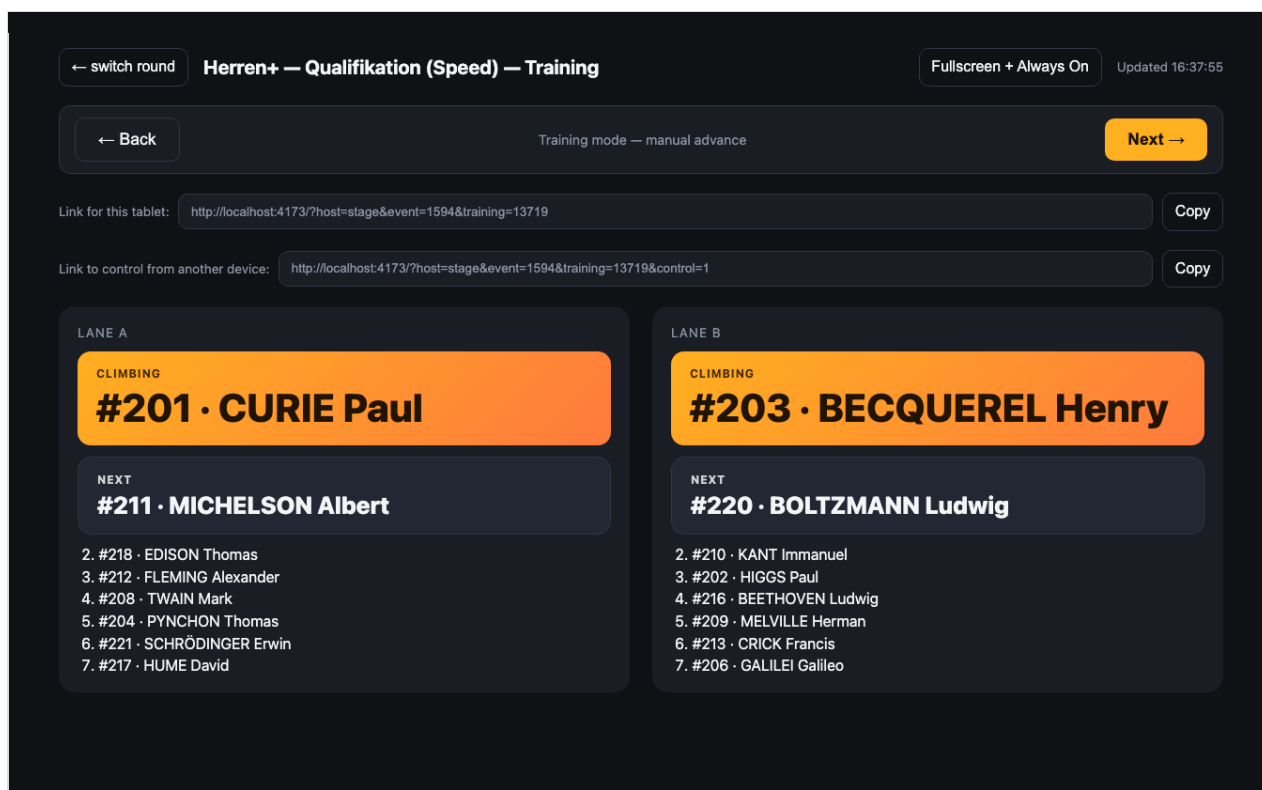

Figure 8: Training board with manual control and both tablet links.

In addition to the normal tablet link, a second field “Link to control from another device” appears on the board. Open this link on any other device (phone, second tablet, ...). A lean control view appears there with just the current names and two large buttons.

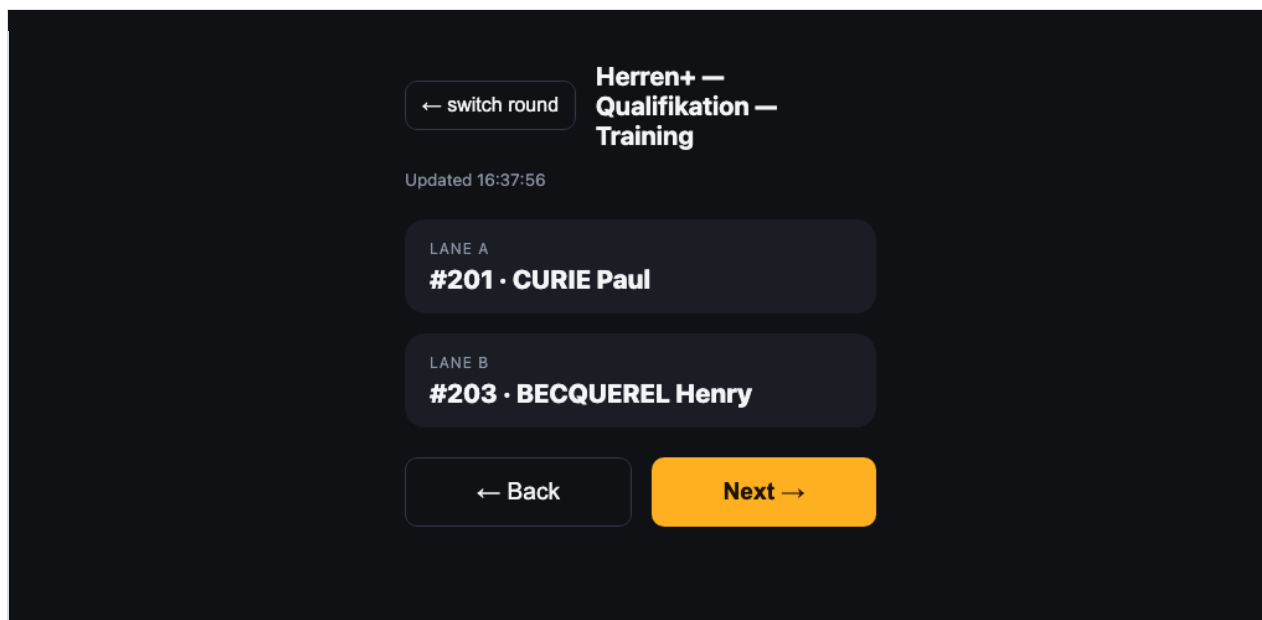

Figure 9: Control view on a phone.

Pressing a button there updates the tablet automatically within about one second, and vice versa. The control link doesn't require a login. It should be agreed in advance who does the advancing (the tablet in the call zone, or a referee via phone).

## 5. Bouldering

Boulder qualifications run in a rotation format. The athletes move from boulder to boulder, each with a fixed time interval per attempt. For the display, this means:

### “—” for CLIMBING is not an error

As long as a boulder hasn't been climbed by anyone yet, it shows “CLIMBING —” instead of a name, with “NEXT” already showing who will be the first to arrive there. This is the normal transitional state until the rotation reaches this boulder.

## Groups and Courses

With two parallel groups at the same time, A and B are shown. Depending on how the competition is set up, these areas are called “Group A”/“Group B” or “Course A”/“Course B”, with both variants operated identically: tabs at the top of the board for switching.

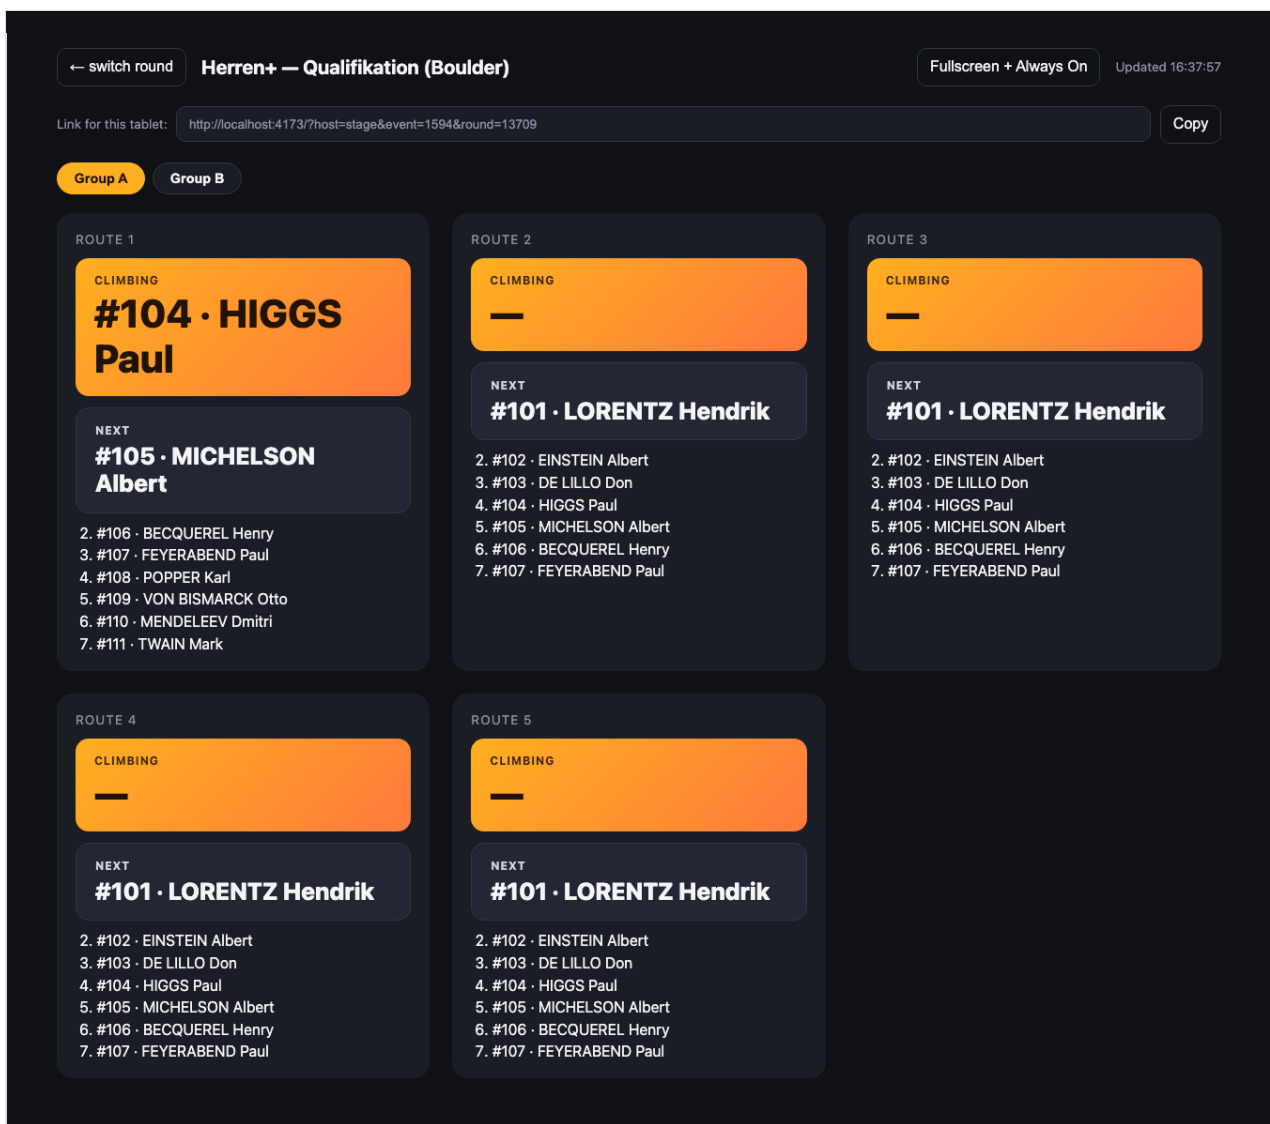

Figure 10: Boulder qualification with “Group A”/“Group B” tabs and five boulderers.

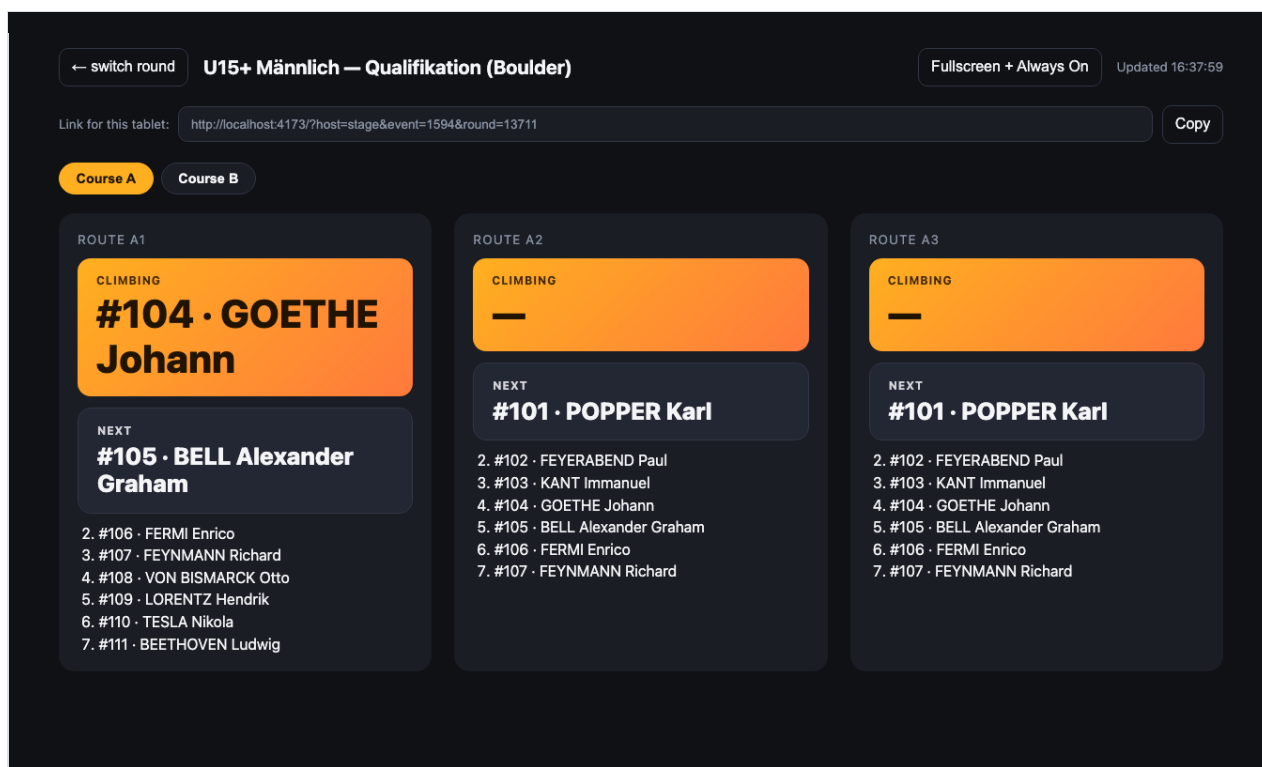

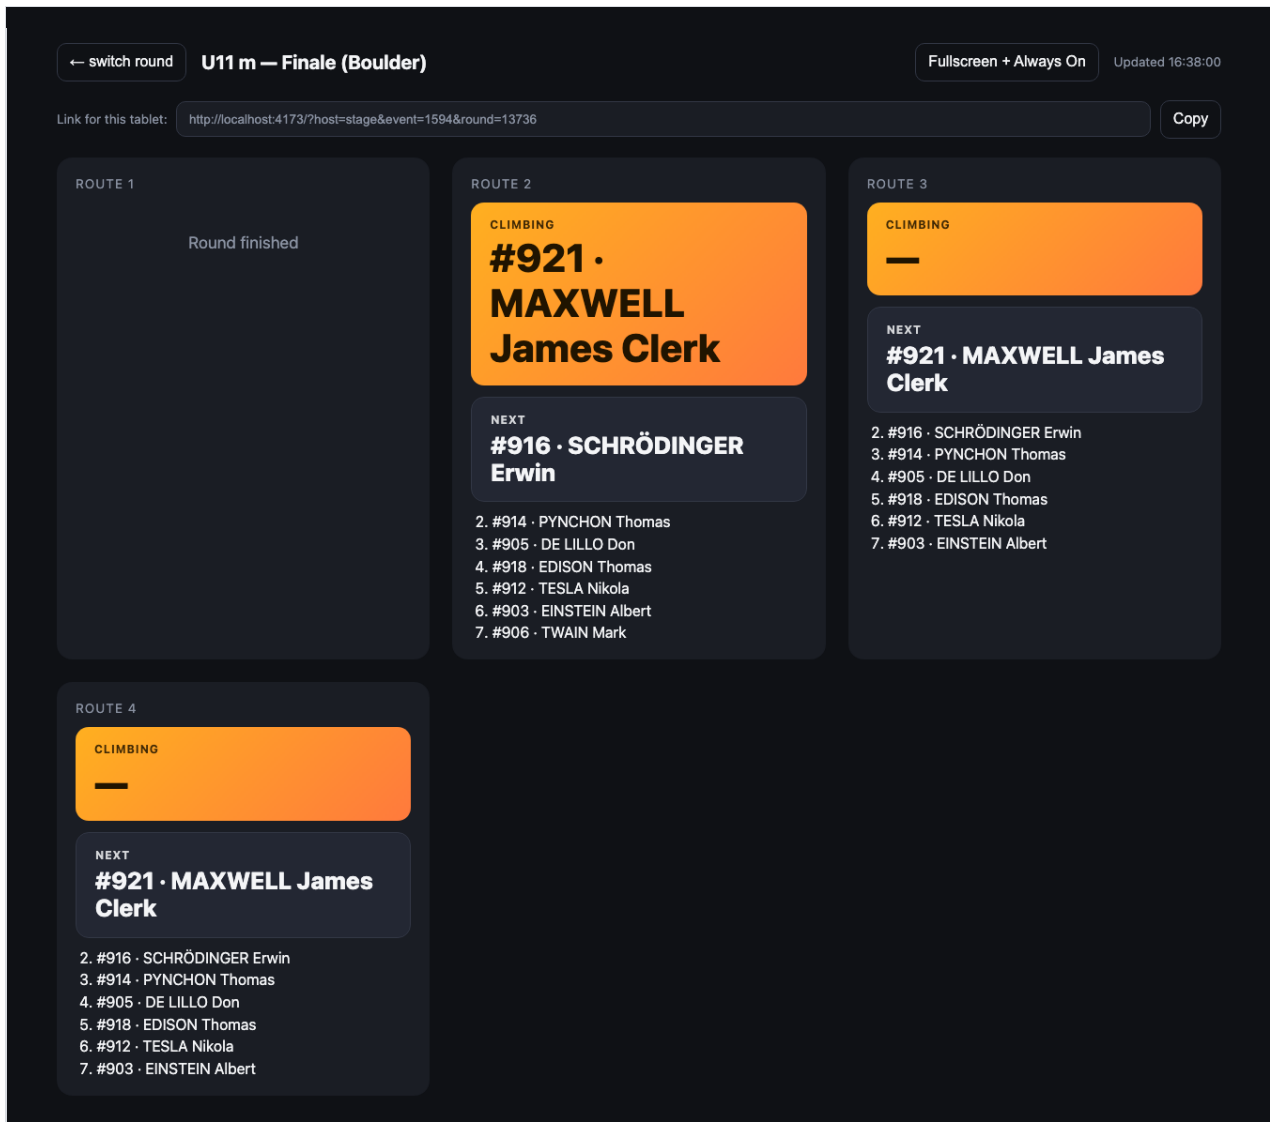

Figure 11: The same operation with “Course A”/“Course B”, here with three and two boulders per course, respectively.

The currently active tab shows only the boulders of the selected area. The other area continues to run independently in parallel and can be shown at any time via the second tab. Just as with the link for a single round, the “Link for this tablet” link also remembers here which area was selected.

## The Final

The boulder final also runs via the same display. One column per boulder, with the same “—” principle for boulders not yet reached. Depending on the final format, not all boulders are active at the same time (instead of several in parallel as in qualification), but reading the display remains identical:

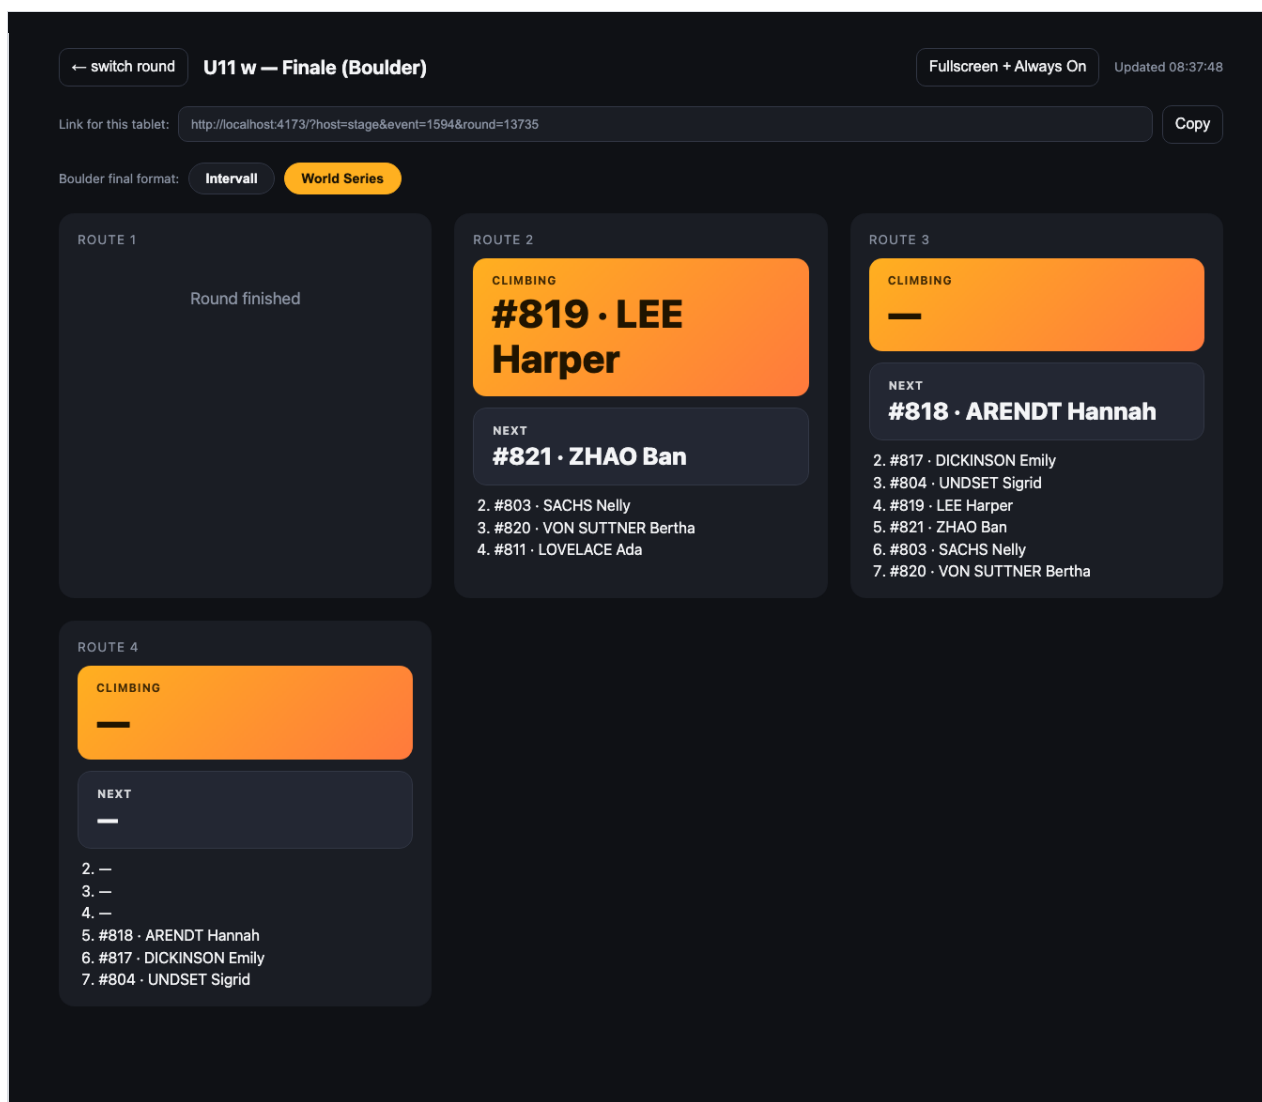

**Figure 12:** Boulder final: Boulder 1 is completely finished (“Round finished”), Boulder 2 is currently running, Boulders 3/4 are still waiting.

A boulder that is already completely finished shows “Round finished” instead of the three cards, like Boulder 1 in Figure 12. This is how the field empties gradually, boulder by boulder, until the entire round is finished.

## World Series vs. Interval

For the boulder final, there are two different formats that can't be set in results.info. Because of this, an additional toggle appears at the top of the board for final rounds: **“Boulder final format”**: **“Interval”** (default, as in qualification, where several boulders are active at the same time), or **“World Series”** (a maximum of two boulders active at the same time; each athlete accordingly waits longer for a boulder not yet reached).

The difference shows up in the waiting list of a boulder not yet reached: in “World Series” mode, it stays empty until the next person is really up, because the name only moves up heat by heat, instead of being at the top from the very start (Boulder 4 in Figure 13).

**Figure 13:** Boulder final in “World Series” mode: Boulder 3 already shows “NEXT” (the candidate is exactly one heat away), Boulder 4 is still three heats away and accordingly stays empty for longer.

You know best which format is actually running. If unsure, simply switch briefly and see which mode matches the real order at the wall. The app automatically remembers the choice per round, just like the tablet link.

## 6. Split View

Split View shows several categories side by side at the same time on one tablet, for example Boulder Men+ next to Boulder Women+. Each column runs completely independently of the others and can itself consist of several rounds, which are played back automatically one after another as soon as the current round in that column is finished.

### Setting Up Columns

1. At the top, select the **"Split View"** tab.
2. Set how many categories should run side by side at the same time, selectable from two to five displays.
3. For each column, click **" + Add Sequence "**. The column is filled with the first not-yet-used round, which can be changed directly via the dropdown that appears.
4. If needed, click **" + Add Sequence "** again to append a second round to the column, for example the qualification followed by the final. The column then automatically advances to the next round as soon as the first one has finished.
5. Click **"Show Split View"** as soon as at least one column is filled.

### Combining Different Disciplines

Within one column, all rounds must be the same discipline, because a column is meant for one continuous category. Between different columns, this is not a problem: one column can show Boulder while another shows Lead at the same time. Speed is not supported by Split View and therefore does not appear in any of the dropdowns.

### Reserving Empty Columns

A column doesn't have to be filled right away. If left empty, it simply shows "Round finished" on the board, just like a round that has actually finished. This lets you prepare a tablet before all categories are finalized, by initially creating more columns than are currently needed.

### Progress per Column

As soon as more than one round is set for a column, it shows its own "Next:" line at the bottom, just like in Sequence mode. The columns run completely independently of each other: if one column advances to its next round, the other columns are unaffected.

## 7. Appendix: Error Messages & Feedback

| Message                      | Meaning                                                                                      |
|------------------------------|----------------------------------------------------------------------------------------------|
| <b>“Couldn't load event”</b> | The Event ID or server has been entered incorrectly — check both.                            |
| <b>“Connection lost”</b>     | Check your internet connection, since the data comes live from results.info.                 |
| <b>Display freezes</b>       | Reload the page in the browser — the last selected round will then open automatically again. |

### Feedback & Feature Requests

At the bottom of the settings screen you'll find the link **“Request a Feature or Send a Message”**. You can use it to report requests, ideas, or problems directly at any time.

## Cheat Sheet: Quick Overview

Here are the key steps at a glance, for anyone who already knows the full guide and just wants a quick reference.

- **Load event:** Enter the Event ID (from the results.info address) and server → **“Load event”**.
- **Select round:** Select category/round in the dropdown → **“Show”**.
- **Reading:** CLIMBING = on the wall · NEXT = up next · list below = after that.
- **Keep screen awake:** **“Fullscreen + Always On”**. On iPads, additionally: Settings → Display & Brightness → Auto-Lock → **“Never”**.
- **Multiple tablets:** **“Link for this tablet”** — copy it and save it on that one tablet as a home screen icon/bookmark.
- **Boulder final:** if needed, switch **“Boulder final format”** at the top (Interval/World Series), depending on what's actually running.
- **Speed final interleaved:** **“Sequence”** → pair two categories. If it doesn't advance automatically: **“⇌ Switch category now”**.
- **Multiple categories at once:** **“Split View”** → choose the number of columns, then **“+ Add Sequence”** per column for the desired rounds.
- **If there are problems:** Reload the page in the browser (the last selected round comes back automatically). **“Connection lost”** → check your internet connection. Feedback anytime via the link at the bottom of the settings screen.
